CMS Practical Sheet

Flower Flora – Flower arrangement and online selling

Experience gained

We had to make a web site within the content management system. We selected the joomla content management tool to develop this site. And also I selected topic to this web site **"Flower Flora"**. The web site contains the business of the flower arrangement and the online selling the gifts associated with flowers.

Initially I got the experience of changing the template and how to change the template. And also we got the knowledge about adding menu items and articles. The "**home**" page of the web site contains the article about the services of Flower Flora business. And also the **"About us"** page contains the details of the Flower Flora and contact details of the business owner. The experience of the adding shopping cart and PayPal integration are gotten. I add the shopping cart functionality with the "Rock quick cart" extension and the added the PayPal integration. And we got the experience adding the functionalities Google Map and the media extensions. I added the google map for the "About us" page and video for the "Home page". I added the chat facility via the Skype at the **"Contact us"** by installing the Skype extensions for the Joomla site. By installing the sms verify extension I added the verification a user via the sms at the **"Messaging"** menu.

And also I got the knowledge about adding a **"Gallery"** with the FlippingBook extension. And also I got the knowledge about how to add the security extensions and the access controlling to the Joomla site by adding security extensions to the joomla site with kSecure, KeyCAPTCHA, Securitycheck, content restriction and login redirect extensions.

Problems/ Issues faced

I faced some problems when developing this web site.

1. Some extensions are not free. (E.g.: CRM extensions and sms extensions)
   I couldn't install this CRM extensions because most of the CRM extensions are paid ones.
2. Skype status are not visible in my site.
   By clicking the "Contact us", can go to the see the Skype status. But Skype status are not visible in my site. My template is caused to this happen.
3. Some extensions cannot be installed. (E.g.: Ozeki sms extension)

This Ozeki sms extension cannot be installed in the joomla 3. Version.

How problems/issues were solved

1. I found the free extensions for paid ones.
2. And also I installed other extension that can be installed on Joomla 3.x for verifying by the sms.
3. My Skype status are not visible. Then I included the module that is a forum type and through this forum users can ask the questions.
